07 Your Practice Checklist
08 A Note From DG·IP

Welcome & How to Use This Guide

You don't need a computer science degree or investor funding to start building something real — you need a genuine problem, a simple first version, and the discipline to test it with real people. This track walks through the same lean process founders around the world use, adapted for a first-time builder in Pakistan.

> **Mentor Tip**
> Talk to ten real potential users before writing a single line of code — it's the cheapest research you'll ever do.

Estimated time: 6–8 weeks · 4–6 hrs/week · Level: Some tech skill from another module is a plus

01 Foundations

Finding a real problem worth solving

The best businesses start from a specific, real problem the founder understands deeply — not a copied idea.

01 What actually makes a startup
Solving a real problem, repeatably, for people who will pay or engage.

02 Spotting problems around you
Looking at your own school, community, or daily frustrations for ideas.

03 Idea validation
Talking to potential users before building anything, to test if the problem is real.

04 Competitive research
Understanding who else is solving this, and what you'd do differently.

★ Practice Project

Interview five people about a problem you think you've spotted, and write down what you actually learned.

02 Building the Basics

Turning an idea into a plan

A simple, one-page plan keeps you focused far better than a 20-page business plan nobody reads.

01 The lean canvas
A one-page framework covering problem, solution, and audience.

02 MVP thinking
Defining the smallest version of your idea that still delivers real value.

03 Basic market research
Sizing your potential audience realistically.

04 Naming & positioning
Describing what you do in one clear sentence.

★ Practice Project

Fill out a lean canvas for your idea and write a one-sentence pitch you could say out loud.

03 Building & Testing

Making your first version real

This is where the idea becomes something people can actually try — even if it's simple.

01 Choosing your MVP format
A website, a simple app, or even a manual service — pick the fastest path to testing.

02 Using the skills you already have
Applying HTML/CSS, design, or Python skills from other modules to build it.

03 Getting your first real users
Reaching ten real people willing to try what you've built.

04 Collecting honest feedback
Asking questions that get truthful answers, not just polite ones.

★ Practice Project

Launch a simple landing page or working prototype and get at least 10 people to try it.

04 Growth & Pitching

Telling your story and finding support

A great idea still needs to be communicated clearly to grow — this phase covers the storytelling and resources to do that.

01 Basic budgeting
Understanding costs, even for a free or low-cost first version.

02 Storytelling & pitch decks
Structuring a short, compelling pitch anyone can follow.

03 Finding mentorship
Where young founders in Pakistan can find guidance and community.

04 Funding pathways for young founders
An honest overview of grants, competitions, and early funding options.

★ Practice Project

Build a 6-slide pitch deck for your idea and present it out loud to at least one other person.
